PROFESSIONAL SUMMARY

Aspiring cybersecurity engineer and self-driven technology enthusiast pursuing a B.Tech in Computer Science, passionate about turning complex problems into elegant, real-world systems — from anomaly-detection pipelines to blockchain-backed verification platforms. A hackathon regular and hands-on builder at the intersection of AI, security, and full-stack development, fueled by curiosity, rapid self-learning, and a relentless drive to ship impactful engineering work.

EDUCATION

REVA University | B.Tech – Computer Science and Engineering

CGPA: 7.3 | Bangalore, India

2023 – Present

Springdays School | XII

Percentage: 62.6% |

2021 – 2023

B.M.D Jain School | X

Percentage: 82.8% |

2021

CORE SKILLS & TECHNOLOGIES

- **Languages:** Python, C, Java.
- **Databases:** MySQL, MongoDB.
- **Security Tools:** Nmap, Wireshark, J-crypt, Linux.
- **Tools & Platforms:** Git, GitHub, VS Code, Figma.
- **Concepts:** Object-Oriented Programming (OOP), Computer Networks, Operating System.
- **Interests:** UI/UX Design, CTFs, Photography.

PROJECTS

1. Real-Time Log Analysis Dashboard

Tech Stack: Python, PySpark, Isolation Forest, Graph-Based Analysis

Personal project | Nov 2025

- Built a real-time log anomaly detection system using PySpark and a hybrid Isolation Forest + graph-based analysis model, processing log events.
- Built an interactive monitoring dashboard surfacing live alerts, reducing manual log review effort and enabling proactive incident response.

GitHub: [Cybersec_pjcts](#)

2. DocVerify

Tech Stack: Next.js, Scaffold-ETH 2, Ethereum, Solidity, IPFS, Pinata, SHA-256

Team Project | Apr 2026

- Designed a decentralized platform built on Scaffold-ETH 2 that enables users to secure documents by pinning them to IPFS via Pinata and anchoring their SHA-256 fingerprints on the Ethereum blockchain for immutable verification.
- Features a modern Next.js dashboard for seamless document uploading, cryptographic integrity checks, and real-time on-chain registry management.

GitHub: [DocVerify](#)

3. InternShield

Tech Stack: React, Next.js, MongoDB, JWT, LLM-based Analysis

Personal project | May 2026

- Built an AI-powered platform that verifies internship offer letters and detects scams using hybrid LLM analysis and real-time community signals. Built with Next.js and MongoDB.
- Empowers students with high-fidelity trust scores, ATS resume optimization, and actionable career insights to ensure a safe job search.

EXTRACURRICULAR ACTIVITIES

Technical Member | Dev/Track

Sep 2023 – Oct 2024

- Contributed to two end-to-end project cycles — one in web development as a web scraping developer, and another in the UI/UX domain as a product designer. Applied core design principles to create clean, functional, and visually engaging interfaces for users/stakeholders.
- Balanced technical and design responsibilities to deliver solutions that were both data-driven and user-focused.
- Actively attended cybersecurity meetups, events, and webinars to stay current with emerging threats, tools, and best practices.
- Participated in numerous hackathons, collaborating in teams to design and build solutions under time constraints.

ACHIEVEMENTS

1. Smart Bengaluru Vision Ideathon

Nov 2025

Shortlisted among 150+ teams for proposing a scalable online fraud detection solution using data-driven analysis and anomaly detection techniques, demonstrating strong system design and analytical skills.

2. AEGIS-X — Stellantis Hackathon

Jul 2026

Shortlisted among 20 teams in a 5-member team for building a self-healing ECU monitoring and recovery middleware for automotive systems; built the foundational architecture of the project.
